Instrument Manifold Valves

Series 5000

Accurate flow measurement is of primary importance in achieving an efficient process system. Autoclave Engineers offers a complete line of needle, gauge and instrument manifold valves designed to provide accurate, safe and dependable flow measurement. Manufactured for Autoclave Engineers, the design of these valves reflects extensive engineering and manufacturing experience, resulting in attainment of the highest standards for valve quality and reliability.

AE Series 5000 needle, gauge and instrument manifold valves have been engineered to provide versatility in meeting specific process requirements. Several standard bonnet assemblies offer different stem, seal and material selections. Bonnets are installed in hard seat, soft seat and roddable valve models of varied body designs to accommodate the process control, flow measurement and mounting requirements of specific applications. Most valves are rated for pressure service to 6,000 psi (414 bar) with certain models rated to 10,000 psi (690 bar).

Features:

• One piece bar stock construction with full material traceability.
• Back seating of stems in a fully open position prevents stem backout.
• Permanent locking of valve bonnet prevents accidental removal while operating valve.
• Stem seal isolates the lubricated stem threads from the process.
• Stainless steel models of needle, gauge and instrument manifold valves, equipped with needle stems, meet NACE MR-01-75.
• Optional high temperature packing for compatibility to 1000°F (538°C) on certain models.
• All valves are designed in accordance with ASME/ANSI B16.34-1988 and ASME Section VIII, Div. 1.
**Instrument Manifold Valves - General Information**

**Needle Valves - Gauge Valve - Instrument Manifold Valves - Customer Support**

**Needle Valves**
Autoclave needle valves are engineered to provide a reliable method for isolating instrumentation from the process and for throttling or shut-off requirements. AE Series 5000 Valves are bubble tight in both the seated and back seated positions. Both hard and soft seated models are available. These needle valves will accept a variety of pipe sizes from 1/4” to 1” and are rated for either 6,000 psi (414 bar) or 10,000 psi (690 bar).

**Gauge Valves**
Gauge valves are primarily used to isolate the process from instrumentation such as gauges or transducers. These valves are typically used in conjunction with block and bleed valves. AE Series 5000 gauge valves are available with an extended length between the inlet and the bonnet centerline to ensure the valve extends far enough from the process connection to clear the pipeline insulation or to distance a socket weld end from the bonnet. Autoclave gauge valves accept a variety of bonnet styles, threaded pipe sizes and socket welds and are rated for service to 6,000 psi (414 bar).

**Instrument Manifold Valves**
Autoclave instrument manifold valves provide a safe, economical and convenient method of isolating, blocking, bleeding and calibrating instruments, meters and pressure transmitters. These valves are available in numerous body, bonnet and seal configurations with FNPT, tube fittings and/or instrument flange connections.

AE Series 5000 instrument manifold valves operate to pressures of 6,000 psi (414 bar) and offer excellent flexibility with different body patterns and hard seat models utilizing either a vee, ball or non-rotating stem. Valve models include 2, 3 and 5 bonnet remote line mounting; 2, 3 and 5 bonnet direct mounting single flange; and 2 and 3 bonnet direct mounting, dual flange. Vee, ball and non-rotating tips are available in hard seat models; soft seats use only vee tip stems.

**Customer Support**
Autoclave Engineers is prepared to assist you in every phase of the design/application cycle. Our technical sales specialists will work with your design team to ensure the correct valve configuration is selected, and/or to custom engineer a special valve for your individual requirements. Our worldwide sales and service organization is available to conduct any on-site review/analysis of your application requirements or to provide timely installation and repair services. Whatever your need, Autoclave’s engineering experience and customer oriented focus will help you find a solution.

**Pressure vs. Temperature**
Ratings for body, seat and packing materials

![Pressure vs. Temperature Graph](image)

**Note:** Soft seats are bubble-tight at pressure vs. temperature ratings shown above. Metal seat meets ANSI B16.104 Class V.

All general terms and conditions of sale, including limitations of our liability, apply to all products and services sold.
### Two Valve Calibration Manifold - Model 6M2R

Model 6M2R two valve calibration manifold provides an economical and convenient method of blocking, bleeding and calibrating pressure transmitters. This valve may be mounted rigidly to a mounting bracket, providing a safe isolation valve, while reducing the number of fittings and space required for installation.

**Features**
- Pressures to 6,000 psi (414 bar)
- Available with needle or self-aligning ball stem
- 3/16” bore

### Three Valve Manifold - Model 6M3R

Model 6M3R three valve manifold features over-sized Type “C” bonnets to provide maximum durability. Two block valves and one equalizing valve are designed in a single body, making the manifold ideal for on-line instrument calibration. Integral valve construction eliminates the use of numerous valves, nipples and fittings.

**Features**
- Pressures to 6,000 psi (414 bar)
- Large 3/16” diameter equalizing ports for viscous fluid service applications
- 3/16” bore

Model 6M5R five valve metering manifold consists of two shut off valves, two equalizing valves and a single vent valve. This single unit takes the place of the conventional piped up 5-valve manifold generally found on field meters or gas service differential transmitters.

**Features**
- Pressures to 6,000 psi (44 bar)
- Replaceable soft seats of Arlon with rodding out capability on block valves with C & D bonnets
- Arlon soft seat inserts available for equalizers and bleed valve with CN bonnets
- 3/16" bore

**Two Valve Manifold Single Flanged - Model 6M2D**

Model 6M2D two valve, single-flanged manifold is designed for direct mounting to static pressure instruments where calibration capability is required. Rugged one piece construction is ideal for applications where remote mounting from the process is desired without compromising instrument stability. This calibration manifold features compact design and secure installation by eliminating unnecessary piping, valves and fittings. A rigid mounting kit is provided for convenient pipe stand unit assembly.

**Features**
- Pressures to 6,000 psi (414 bar)
- Type “C” & “F” valve bonnets feature self centering ball stem, providing positive shut-off capability
- 3/6” bore

**Three Valve Manifold Single Flanged - Model 6M3D**

Model 6M3D three valve, single flanged manifold bolts directly to the pressure differential transmitter. This unit is used in applications where close coupling to orifice flanges is not desired. These manifold valves provide safe operation and eliminate the need for unnecessary piping, valves and fittings. The manifold comes complete with mounting kit for quick and easy installation.

**Features**
- Pressures to 6,000 psi (414 bar)
- Standard 2.13” (54.1mm) center-to-center inlets and outlets
- Special 2.19” (55.6mm) center-to-center instrument flange outlets available

Model 6M5D five valve manifold mounts directly to the differential pressure transmitter. The two horizontal block valves allow easy removal of the instrument for servicing and the three valves on top of the manifold provide an easy method for accurate field calibration using the manifold vent connection rather than the instrument drain connections. Manifolds are shipped complete with mounting kit for quick and easy installation.

Features
- Pressures to 6,000 psi (414 bar)
- Self-centering ball seats provide positive shut-off
- Standard 2.13’ (54.1) center-to-center inlets and outlets

Three Valve Manifold Dual Flanged - Model 6M3F

Model 6M3F three valve, dual flanged manifolds is designed for close mounting differential pressure instruments to orifice flanges or orifice changer fittings. The flanged valve outlet is bolted directly to the pressure transmitter body. By bolting standard football flanges to the manifold inlet, the complete assembly can be close coupled to orifice flange taps using eccentric solid bar stock nipples. These manifold valves provide a simple, rugged and dependable installation.

Features
- Pressures to 6,000 psi (414 bar)
- Available with needle or self-aligning ball stems
- Standard 2.13" (54.1) center-to-center inlets and outlets
- 3/16" bore

Model 6M3S three valve single or double flanged manifold bolts directly to the pressure differential transmitter. This unit is used in applications where close coupling to orifice flanges is desired. These manifold valves provide safe operation and eliminate the need for unnecessary piping valves and fittings. The manifold comes complete with mounting kit for quick and easy installation. The bonnet assembly is suitable for severe service applications.

**Features**
- Pressures to 6,000 psi (414 bar)
- Standard 2.13" (54.1) center-to-center inlets and outlets

3/16” Orifice Liquid Level Manifold - Model 6M2L

Model 6M2L manifold uses the hydrostatic head technique to efficiently utilize a differential pressure transmitter for level measurement. The 6M2L reduces the number of vessel entry points which eliminates the need for instrument piping supports. This reduces the installation cost on pressurized or atmospheric vessels requiring a "wet log" or "diptube" utilizing the 6M2L's unique mounting system.

Features
- Pressures to 6,000 psi (414 bar)
- Optional Arlon soft seats
- Available with needle or self-aligning ball stems
- Standard 2.13" (54.1) center-to-center inlets and outlets

Three Valve Meter Manifold - Model 6M3M

Model 6M3M three valve meter manifold is designed for convenient isolation, venting and on-line calibration of local chart recording meters. Durable bar stock body construction with integral equalizing and vent valves is ideally suited for mounting beneath field meter cases.

Features
- Pressures to 6,000 psi (441 bar)
- Replaceable Arlon soft seats are field serviceable and feature positive shut-off capability
- Multi-ported pressure taps allow static pressure measurement to be taken upstream or downstream

Two Valve Calibration Manifold 3/8" Bore, Roddable - Model 6M2C

Model 6M2C two valve pressure manifold is designed for remote mounting, single-instrument applications. Both line and vent valves are integral with the single piece body making this manifold ideal for on-line calibrations and testing. It is also available with process tube connections.

Features
- Pressures to 6,000 psi (414 bar)
- One-piece solid barstock construction
- High temperature model available
- Optional, replaceable, roddable Arlon soft seats

Two Valve Single Mount Calibration Manifold - Model 6M2M

Model 6M2M two valve pressure manifold is designed for direct mounting, single instrument applications. Secure installation is ensured by a rigid mounting block manifold. Both line and vent valves are integral with the single piece body making this manifold ideal for on-line calibration and testing.

**Features**
- Pressures to 6,000 psi (414 bar)
- Type “C” and “F” bonnets feature self centering ball stem, providing positive shut-off capability
- 3/16” bore

Two Valve Dual Mount Manifold - Model 6M4M

Model 6M4M two valve dual mount manifold connects two separate pressure instruments to a single process connection and assures secure installation. Twin sets of integral block and bleed valves are provided in a single piece body allowing independent instrument operation and servicing.

**Features**
- Pressures to 6,000 psi (414 bar)
- Separate integral bleed valves with 1/4” lower side vent connections
- Type “C” and “F” valve bonnets feature self-centering ball stem, providing positive shut-off capability

Instrument Manifold Valves - Bonnets

Bonnet Assemblies

Autoclave Engineers needle, gauge and instrument manifold valves utilize several different bonnet styles to increase operational flexibility and process compatibility. These bonnets offer both adjustable and non-adjustable packing as well as designs incorporating ball or needle stems, non-rotating stems and a non-rotating plug. Standard materials for bonnet, stem and handle construction are offered in either carbon steel or stainless steel with monel available as an option. Handles are pinned to the stem and are designed to shear the pin to prevent over torquing. Standard seal materials are Viton O-rings or Teflon packing with Grafoil packing available as an option.

Features
- Stem back seat the bonnet for a metal-to-metal seal isolating the packing from the process.
- All stem packing is located below the stem threads thereby isolating stem threads from process fluids.
- All bonnets include color-coded dust covers to prevent abrasive materials from entering the stem threads. The color coding identifies the packing materials.
- All threaded bonnets include a lock pin to prevent accidental removal of the bonnet.
- Lockplates also available as an option and are standard on the “H” and “K” bonnets.
